

**GSM 2G/4G  
GATE OPENER  
12V**

MODEL NUMBER GSM-4G-GATE -V18

## Product Information

The GSM 2G/4G Gate Opener incorporates a professional industrial grade GSM engine that receives calls at its sim number, as any ordinary GSM phone. The system operates in the GSM module quad-band 850/900/1800/1900/2100mhz and has 2G and 4G capabilities when using a 2G or 4G simcard.

Just to give an example, if your SIM has a phone number 9228 9810555, this is the number you call to open the gates. The system has a memory where you will store the numbers of people enabled to open the gate (up to 200). When the Gate Opener receives a call, it will check the calling number. If the number is a stored number it will reject the call and open the gate. Therefore, avoiding any call charges being incurred.

The advantages of this over other systems is that you do not have to leave your car to open the gates, avoiding weather and safety issues. Furthermore, you do not need to carry around a separate remote device or indeed replace it if it were to get lost!

## Specification

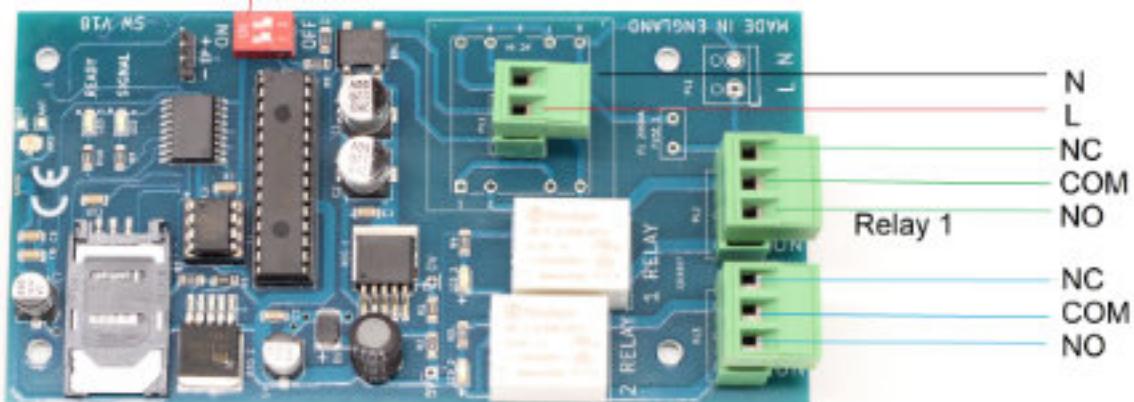

- Simply Dial the Simcard Number to Open the Gate. It will Reject the Call Avoiding Charges Being Incurred.
- Phone List for Added Security (up to 100)
- Text for Signal Strength
- Text for Fast/Slow Relay Pulse
- Text to Keep the Gate Open (relay 1).
- Text to Open the Gate for Pedestrian Access (relay 2).
- Micro 2G 3G 4G simcard
- Antenna Supplied
- Sim Active Function
- Dimensions - L150 x W90 x H45mm
- Dimensions PCB Only - L125 x W67mm
- Operating Temperature -10 to +40c
- INPUT - 9 - 24 VDC (240VAC/ 115VAC is available)
- Output Relays are 10Amp N/O or N/C Volt Free
- Quadband Frequency - 850/900/1800/1900/2100mhz
- 4G Bands : B1 -B5, B7 - B8, B12 - B14, B18 - B20, B25 , B26, B28 , B66, B71
- No Need to Keep Replacing Remote Keyfobs When They are Lost

### SIM Active Function

Our GSM Auto Dialler comes with a SIM Active function meaning that it will send a message every six weeks to a preprogrammed number we at GSM Activate own to prevent the SIM card being shut down due to inactivity.

## Instructions

Dipswitch  
1 On = 4G  
1 Off = 2G  
2 Not Used

### IMPORTANT - PLEASE READ

Please make sure you disconnect the power when you fit the simcard. Unlock the simcard Holder by using square gap and pushing downwards and then slide in the simcard, making sure that the clipped corner of the simcard is downwards to the board, and then lock back into place .

### Powering the 2G/4G Gate Opener

Connect 12 volts to the input connector as per figure 1. Once power has been applied the **blue** network LED light will flash once every second. Once a signal has been found the **green** ready LED will come on and stay on indicating the unit is ready to use.

### Signal Strength

To help ensure that you place the unit in a suitable position you can text the unit

**#SIGNAL#**

The dialler will perform a test on the signal strength. You will then receive a signal strength score of between 0 up to 30. We strongly recommend that place the unit where you can receive a signal strength score of at least 10. Anything less than that will render the unit unreliable.

### 2G or 4G

The GSM Gate Opener can work on both 2G and 4G networks depending on which model you have. You can choose which network the unit will use at the start up using the following dipswitch settings

Dipswitch 1 OFF = Connects to 2G

Dipswitch 1 ON =Connects to 4G

We strongly recommend checking the signal strength on 2G and 4G and using which has the highest signal strength score. The signal strength should be at least a score of 10 for reliability.

Note we no longer supply 3G models as 3G will be stopped in Europe late part of 2022 for reliability.

## How to programme the 2G/4G GSM Gate Opener

Once the unit has a **green** LED light it is ready to use. The unit has a caller ID function so only authorised numbers you store can activate the unit. If caller ID is left OFF anyone phoning the units number can operate the relays.

**Please Note** - We have colour coded the **HASHTAG** and **EQUALS** symbols to make it easier.

To turn caller ID on send a text message

**#ID=ON#**

To turn caller ID off send a text message

**#ID=OFF#**

**NOTE** - If you do not require authorised users please skip to the next page.

### Programming Caller ID

To programme a number to the caller ID (WHL), send this text message code:

**#WHL=NUMBER#**

To delete the number send the text message code

**#DEL=NUMBER#**

Example      **#WHL=07123456789#**      Stores your mobile number (max 100 users).  
                 **#DEL=07123456789#**      Deletes your mobile number

If the code is accepted the unit will reply “WHL NUMBER STORED” or “WHL NUMBER DELETED”

**PLEASE NOTE** - You can only send one number at a time. Please send the message and wait for the text acknowledgement before you attempt to add another number.

Please ensure that you have credit on the simcard to receive the text acknowledgement. It may take some time to receive a text acknowledgement depending on how busy your telephone provider is at the time.

### Reset Function

For a quick reset and to clear all numbers there is a built in reset function that can be triggered by sending the text

**#RESET#**

The unit will remove all WHL numbers stored and return to factory settings

## How to use the 2G/4G Gate Opener

Using your mobile phone or landline, dial the simcard number. You will hear 1 ring tone. The unit will automatically hang up. This will prevent any call charges being incurred. The relay will then pulse for a period of time. This is the unit sending the signal to your gate control board to open the gate.

**IMPORTANT - PLEASE READ** - Calling in using the 4G mode can currently be inconsistent due to several factors such as, signal strength, voice over LTE (4G calling) being available on simcards and phone etc. If you experience unreliability on 4G Please boot the unit up using 2G or 4G depending on which has the better signal strength

### Relay Pulse Time

The unit has an adjustable pulse time for the phone call activation. The unit will either pulse for 1 second or 3 seconds as some gate controls need a very quick pulse and others a slower pulse.

To change the pulse time you will need to send the text message

**#SLOW#** - Sets the relay pulse time to 3 seconds  
**#FAST#** - Sets the relay pulse time to 1 second

The default setting is slow

### Texting the Gate to Open

If you need keep the gate permanently open or for a longer period of time, you can send the text command:

**#OPEN#**

To close the gate simply call the simcard number. This will cancel the relay and close the gate.

### **IMPORTANT - PLEASE READ**

Some gate systems do not have the facility to allow the gate to stay open. Please refer to your gate control system manual for further information

### Pedestrian Access

Relay 2 controls the pedestrian gate. You will need to text the unit

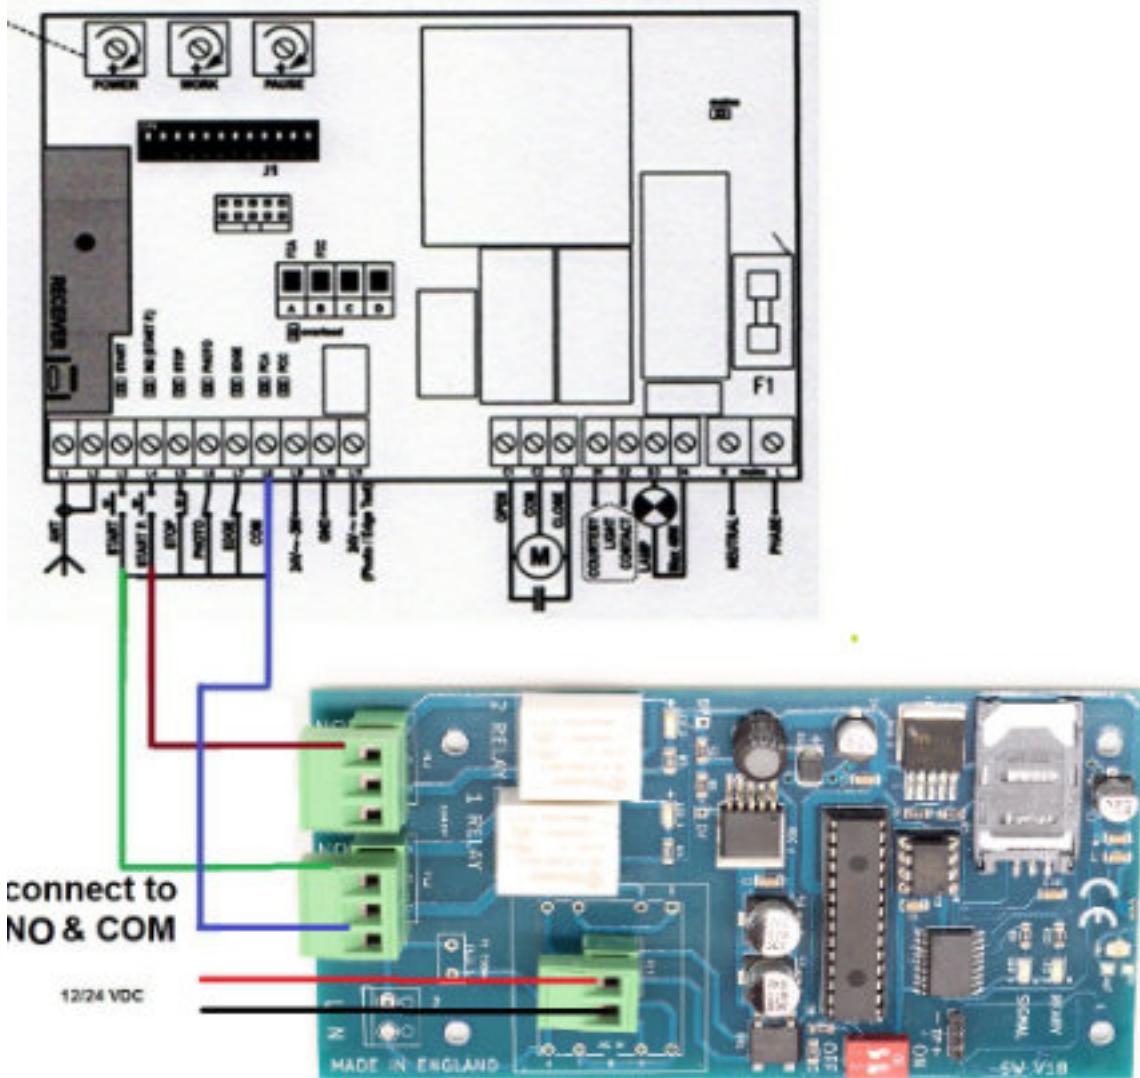

**#PEDESTRIAN#**

This will pulse relay 2 on for 3 ½ seconds. This should be sufficient time to open the gate to allow for pedestrian access.

### SIM Active Function

The unit has a sim active function which monitors the activity on the simcard. If it has been inactive for 6 weeks it will send a phone call to a pre-recorded number. This will eliminate the problem of sim's getting shut down if they are unused for 3 months.

ELECTRICAL CONNECTION TABLE

## Quick Reference

Send Text	Operation	Acknowledgment
#OPEN#	Locks Relay 1 On	
#PEDESTRIAN#	Pulses Relay 2	Gate Open
#SLOW#	Sets Relay Pulse time to 3 seconds	
#FAST#	Sets Relay Pulse time to 1 Second	
#WHL=NUMBER#	Stores Number to White List	Number Stored
#DEL=NUMBER#	Deletes Number from White List	Number Delete
#ID=ON#	Turns Caller ID On	ID = ON
#ID=OFF#	Turns Caller ID Off	ID = OFF
#RESET#	Clears all numbers from White List	
#SIGNAL#	Gives a Signal Strength Test	Score of 1 - 30
